

USAF SPECIAL WARFARE BASIC MILITARY TRAINING PREPARATION MANUAL

Body Weight - Strength and Conditioning

Physical Training Program

OBJECTIVE: To educate Special Warfare (SW) candidates on foundational physical fitness principles and to achievement of passing score on initial Physical Ability Stamina Test (PAST) test.

Introduction

This program is designed for SW candidates to begin the transition from the civilian world to the Special Warfare military culture of continual physical readiness. If candidates faithfully follow this program – to the best of their ability – in its entirety – they should be able to navigate the turbulence of basic training and develop the ability to fly over the physical bench marks as well as withstand the rigors of the pipeline preparation program. You should report to Basic Military Training (BMT) with the ability to excel on the PAST, be an adequate swimmer (being able to swim 500m in 15:00) as well as, have the ability to ruck for two (2) hours with twenty (20) pounds in your ruck sack (back pack). It is of high importance to complete the swim and ruck training in this program as these events prepare you for test standards and add an extra layer of protection from injuries. Trust the process. Follow the process. The more fit you are, the easier it is to focus on the task at hand. The workouts and the additional education materials provided will assist in preparing you mentally and physically to withstand the training pipeline.

How to Use This Manual

This introduction section will teach candidates how to properly read, understand and implement the information. Though not mandatory, it is recommended that candidates read and follow this manual to adequately prepare for the SW career field.

The intent of this manual is to guide candidates through physical preparation for Basic Training, Special Warfare Indoctrination course, and Assessment and Selection while decreasing the likelihood of overtraining and injury before selection begins.

Start with week one – day one. In order to be optimally prepared, we recommend candidates have a minimum of 8 – 12 weeks of preparation. Our experience has shown that less preparation leads to increased chances of injury and setbacks. Candidates will be asked about their physical preparation for the course. Candidates should be prepared to honestly answer questions about their physical preparation history.

Section 1: Warm-Up or Preparation for Exercise:

Warm-up is critical. Candidates must warm-up to prepare for workout preparation, injury prevention and muscle activation. The dynamic warm-ups in this program use a dynamic stretch, mostly in a walking or ballistic manner where you move the limb dynamically through the range of motion to prepare the muscle for exercise. It is recommended to complete dynamic stretching in the warm-up, while static stretching is preferred in cool-down post workout. Static stretching is when you hold a stretch for a longer period of time, 20-30 seconds or more.

This “Warm-Up” - The exercises are listed on the left and the repetitions (reps) or distance (Reps/Distance) is listed on right. Start at the top of the exercise list and perform the exercise for the prescribed time, distance, or a number of repetitions. Warm-up 1 is to be completed in weeks 1-4 and again during weeks 9-12. Warm-up 2 is to be completed in weeks 5-8 and weeks 13-16.

Section 2: Weight Room Workout

Day 1	Exercise	Sets	Reps	wt/reps
1	Squat	4	8	
Rest 1 Min Between Squat Sets				
2a	Good Morning or RDL's	3	8	
2b	Leg Curls	3	8	
Rest 1 Min Between Combo Sets				
3a	Dumbbell Overhead Shoulder Press	4	8	
3b	Alt Grip Pull Ups Use Bands if needed	4	10	
Rest 1 Min Between Combo Sets				
4a	Dips	3	12	
4b	Alt Dumbbell Curls	3	12	
Rest 1 Min Between Combo Sets				
5a	Mountain Climbers	3	20	
5b	Lying Leg Lifts	3	20	
6	Energy System Development	Reps	Distance	Time
	6 reps 80 yd Tempo Runs	6	80	

All workouts should focus on the proper form and technique before ever increasing weight. The key is posture first, pattern of movement second and then power/load when learning new movements.

The example above is for a “Day 1” workout of Week 1. To the right of this program there is an area to record the weight used for each exercise. On the left side of the sheet there are numbers and letters (1A, 1B, 2A, 2B...). These numbers group the exercises in the order they should be completed.

Day 1	Exercise	Sets	Reps	wt/reps
1	Squat	4	8	
Rest 1 Min Between Squat Sets				
2a	Good Morning or RDL's	3	8	
2b	Leg Curls	3	8	
Rest 1 Min Between Combo Sets				
3a	Dumbbell Overhead Shoulder Press	4	8	
3b	Alt Grip Pull Ups Use Bands if needed	4	10	
Rest 1 Min Between Combo Sets				
4a	Dips	3	12	
4b	Alt Dumbbell Curls	3	12	
Rest 1 Min Between Combo Sets				
5a	Mountain Climbers	3	20	
5b	Lying Leg Lifts	3	20	
6	Energy System Development	Reps	Distance	Time
	6 reps 80 yd Tempo Runs	6	80	

For the above example candidates will complete 1A “Squat” for 10 repetitions, rest 1 min then complete 1 set of 2a “Good Morning’s or RDL” for 8 repetitions followed immediately by 2b “Leg Curls” for 8 repetitions. At this point candidates will rest one (1) minute before repeating the same combo set two more times – for a total of 3 sets. After the third set of this combo set they will move to the next section of the workout.

Record the weight in the chart to include increases in weight. Dumb bell weights should be written as single dumb bell weight even if both are used.

The other main format used for weight room sessions is the circuit theme. Below is an example:

Day 1	Exercise	Sets/Time	Reps
	Perform both exercises in the grouping (1a,1b) for the prescribed amount of reps, do as many rounds of the exercises as you can in the allotted time (4 min in this case). When that time is up move to the activity between 1 and 2 / rest then move to next grouping. Repeat until workout is completed.		
1a	Pull Ups	4 min	4-8
1b	Push Ups		10
	Perform 25 eight count Body Builders / rest 3 min / move to next group		
2a	Forward Lunge/Lateral Lunge (Alternate)	4 min	8e
2b	DBL Leg Glute Bridge (hold at top 3 count)		12
	Bear Crawl forward 30 yds / rest 3 min / move to next group		
3a	Butterfly Sit Ups	4 min	20
3b	Single Leg RDL's		8e

The intent of circuit training is to increase the amount of work performed with limited rest time. With the circuit example above, candidates will perform exercises 1a pull-ups for 4-8 reps immediately followed by 10 pushups, and they will start all over again at exercise 1a without rest BUT maintaining strict form/technique. Candidates will continue this cycle for 4 minutes before moving on to the next exercises. In this example with will then complete 25-8 count body builders rest 3 minutes and move on to the next circuit. If form/technique breakdown begins to occur, rest or slow down as needed. If unable to complete the set number of reps, take a quick break and start again with strict form. Upon completion, record the number of rounds completed in each section. In the Day 1 example below your round will consist of exercises 1-14 for the prescribed number of reps, rest 3 minutes and then complete exercises 1-14 for 2 more rounds.

Day 1	Exercise circuit	Sets	Reps
✓	1 Alt Lunge Forward	3	6e
✓	2 Mountain Climber (Wide)	3	20e
✓	3 Push Ups (4 sec down, 4 sec hold, 4 sec u	3	5
✓	4 Bicycle Crunch	3	20e
✓	5 Body Wt Squats (4 sec, down, up)	3	20
✓	6 8 count Body Builders	3	15
✓	7 Close Grip Push Ups	3	12
✓	8 Butterfly Sit Ups	3	20
✓	9 Single Leg Glute Bridge	3	10e
✓	10 Backward Lunge	3	10e
✓	11 Wall Run	3	30 sec
✓	12 Side Plank ISO Holds	3	30 sec
✓	13 Extended Glute Bridge	3	12
✓	14 Super Man Seal Ups	3	12
	3 min rest between rounds of circuit (1-14), hydrate, recover, repeat x 3		

Section 3: Regeneration/Cool Down

Recovery/regeneration is important to achieve optimal performance and mitigate injury. All exercise reps in the regeneration/cool down are for a MINIMUM number of repetitions or time. The more tissue is tight, or in the case of the foam roller, the more it is uncomfortable --- the more pertinent it becomes to be doing these exercises

Section 4: Energy Systems Development / RUCK

Energy System Development (ESD) is all-inclusive of activities with a fitness or work capacity focus, like running, biking or rowing. For running events, wear appropriate running shoes to improve efficiency, mechanics, and minimize the risk of injury.

The human body has three energy systems. The difference in the systems is the power output. The shorter the time, the higher power output, the longer the time the less power. A 40 yard sprint will be very fast but only last a few seconds. An 800 yard sprint (two times around a track) would take about 3:00 minutes or more to complete. A mile (4 laps around a track) would take about 7:00 minutes or more for a successful candidate. The higher the intensity you are working the shorter amount of time you can work. In this program you will train all three energy systems.

Rucking- The definition can be as simple as walking around with a backpack on a hike or as difficult as moving fast while wearing with all your military gear over rugged terrain. The verb “to ruck” means getting your gear from A to B in a backpack.” You will train with a ruck walking briskly with a light load of 15-25 pounds.

RUCK TECHNIQUE

- Weight of body must be kept directly over feet, the sole of the shoe must be placed flat on ground by taking reduced strides at a steady pace. Do not over stride.
- When walking cross-country, step over/around obstacles; never step on them.
- When traveling up steep slopes, always traverse them; climb in zigzag pattern rather than straight up.
- When descending steep slopes, keep the back straight and knees bent to take the shock of each step. Do not lock knees.
- Practice walking at a quick, but manageable pace. Do not run with a rucksack as injuries may occur.

** If rucking cannot be achieved, do squats with a rucksack (100 repetitions five times or until muscle failure). To avoid knee injury, squat only to the point where the upper and lower leg form a 90 degree bend at the knee.*

Section 6: Exercise and Activity Descriptions

The movements and exercises are simple and extremely basic – but quite effective. If you are still confused be sure to ask a qualified professional, strength and conditioning coach at your high school, job or your Special Warfare Field Developer for assistance.

Pre – Accession Recovery III – Week 16

Congratulations. You have almost completed a basic preparation program for the United States Air Force Special Warfare Candidate Course. By this time you should feel comfortable in the water and under a ruck. This week is a celebration of your work.

Day of Training 1 Ruck 13

Day of Training 3 Swim 24

Day of Training 5 Ruck 14

These components – the swim and the ruck – are the essential core physical abilities of a Special Warfare warrior. You must be able to get on target and to the rally point, be it land or water. Understand it is the process of training and education, like iron sharpens iron that creates the person worthy of donning the beret.

SW Pre Accession Developmental Swim Training

Swim Workout - Pool Intervals refer to the amount of time from the start of one repetition to the start of the next repetition. For example in pool session 1, 25 meter mixed drills. If you complete the first 25 m swim in 45 seconds, then you get 45 seconds of rest before beginning the next repetition. If the next repetition takes you 60 seconds to complete you only get 30 seconds of rest.

* If the intervals are too difficult you may add additional rest time at a rate of :15 seconds/100m.

Bike Ride - 45 Min

You need a bike that can change gears, has a timer on it and will tell you how fast you are riding. Most commercial stationary bikes will have this on the computer readout.

RPM: How fast your legs are moving per minute.

50 RPM means your leg will make 50 complete circles in 1 minute. This is relatively slow

100 RPM means your legs will make 100 complete circles in 1 minute. This is faster.

Pace	RPM
Ride	50 RPM
Sprint	100 RPM

Adjust Levels as Needed

Distance	Rest
400 M	5 Mins
400 M	5 Mins
400 M	5 Mins
400 M	5 Mins
400 M	5 Mins
400 M	5 Mins

Target Time
1:30 - 2:00

Goal
Try to maintain time for all repetitions

Record Time to Complete All 6 Laps					
Lap 1:	Lap 2:	Lap 3:	Lap 4:	Lap 5:	Lap 6:

Standing on the start line of the track, you will run 1 lap (400 m). You are trying to get the lap in 1:30- 2:00.

You will wait 5 minutes. (rest) Then run the next lap. You will do this 6 times.

If your first lap is run in 1:45 then you are trying to maintain this pace for all your laps.

Record all laps.

Example

- 1) 1:45
- 2) 1:45
- 3) 1:45
- 4) 1:45
- 5) 1:45

Appendix D

800 M Intervals

4 x 800 Meters

Distance	Rest
800 m	6 Mins
800 m	6 Mins
800 m	6 Mins
800 m	6 Mins

Target Time
3:30 - 4:00

Rest
Rest is a slower pace Jogging or fast Walking

Record Time to Complete All 4 Laps					
Lap 1:	Lap 2:	Lap 3:	Lap 4:		

Standing on the start line of the track, you will run 1 lap (400 m). You are trying to get the lap in 3:30 – 4:00.

You will wait 6 minutes. (rest) Then run the next lap. You will do this 6 times.

If your first lap is run in 3:50 then you are trying to maintain this pace for all your laps.

Record all laps.

Example

- 1) 3:50
- 2) 3:20
- 3) 4:00
- 4) 3:50
- 5) 3:50
- 6) 3:50

In this example the airman ran his second lap much faster which caused his 3 lap to be slower than average. This is why we are having you run a consistent time for all laps.

Appendix E

Ruck Pace

4 x 400 Meters

Distance	Per Lap
400 m	3:45
400 m	3:45
400 m	3:45
400 m	3:45

Target Time
3:30 - 4:00

This is a fast walk which means one foot has to be in contact with the ground at all times.
Running has a flight phase which means both feet are off the ground at one time.

Record Time to Complete All 4 Laps					
Lap 1:	Lap 2:	Lap 3:	Lap 4:		

The goal of the RUCK is to walk around the track (1/4 mile) in 3:45 so that a mile will take 15:00 minutes.
The second & third week it will increase to 1 ½ mile in 22:30 minutes.
The third & four week it will increase to 2 miles in 30:00 minutes.
The fifth week it will increase to 2 ½ miles in 37:30.

Appendix F

Definitions

Set – a group of reps or repetitions

Rep – an execution of one complete movement of an exercise

Volume – the combination of sets and reps, generally expressed as reps, time and/or distance

Load – This is the intensity in total weight, distance, speed and/or time of an exercise or work bout

Intensity – This is expressed in percentages, speed, time under tension, overall time and/or distance.

BPM – Beats Per Minute of your heart

HR - Heart Rate

RHR – Resting Heart Rate – usually noted first thing upon waking up

Ruck – Ruck is a military back pack used to carry all your kit

Kit – all the equipment you need to do your job

RM – Repetition Maximum – the total number of properly executed repetitions in one set with max effort

Endurance – “The ability to withstand hardship or adversity especially: the ability to sustain a prolonged stressful effort or activity” usually associated with a specific ability such as muscular, running, rowing, etc.
